The Next Generation
Datacenter Management and Protection

- An affordable yet practicable DCIM solution for any scale, requirement and environment

- A comprehensive approach to manage your IT infrastructure resources and capacity

As the operational requirements of modern datacenters are becoming more complex, it is rather difficult to increase uptime, improve efficiency, better utilize capacity and boost productivity.

In our coming workshop, you will learn the way to prevent the emergence of problems and making plans for future requirements in the following aspects:

- Datacenter effectiveness and efficiency
- Secure the reliability and availability of your datacenter
- Environmental monitoring and alerting via a centralized platform
- Asset management to track all IT requirements
- Physical security management

Want to know more? Come and join our workshop.

Agenda
