

Being able to provide IT services and support within the organization and to deliver effective, secure and citizen-oriented public services are the key mission. Disruption can be costly, not only in terms of consequent financial implications but also in a longer-term harm to reputation. That's why it's vital to have a business continuity plan (BCP) to ensure that the equipment get up and running again as fast as possible.

The latest Virtual Desktop Infrastructure (VDI) Solution based on Hyper-converged Infrastructure (HCI) and all-in-one modular datacenter solution from Sangfor and iDCmini are well integrated together, making it an important part of the Business Continuity Planning.

Experts from Sangfor and iDCmini will share the prevention practice and experience on how to minimize the impacts during business disruption.
